TECHNICAL SKILLS

AI/ML & Deep Learning: Python, PyTorch, TensorFlow, OpenCV, Hugging Face Transformers, CNNs, RNNs, GNNs, Diffusion Models, Generative AI, NLP, Computer Vision

Algorithms & Theory: Graph Theory, Search Algorithms, TF-IDF, Vector Space Models, Information Retrieval

Data Science: NumPy, Pandas, Matplotlib, Scikit-learn, Model Evaluation

Development: C, C++, Java, React.js, Node.js, REST APIs, MySQL, Bash

Concepts: OOP, Data Structures, Operating Systems, SDLC, Parallel Computing (MPI, OpenMP)

Tools: Git, Linux/Unix Shell

EDUCATION

BS COMPUTER SCIENCE

2022-2026

FAST NUCES KARACHI

WORK EXPERIENCE

Climate.io

AI/ML Intern (21 August - 30 November 2025)

TMC (TallyMarks Consulting)

SAP Backend Development Intern (16 June - 25 July 2025)

National Incubation Centre, Karachi

As a Creative Intern [Interviews, content writing, video editing, facilitating meetings] (25th May to 6th July 2021)

PROJECTS

Word Hunt Game – AI-Driven Word Intelligence Game (May 2025)

Developed an AI-themed word game in Python using TF-IDF, KNN, BFS/DFS, Minimax, and heuristic search algorithms. Integrated external APIs to dynamically build themed dictionaries.

Tech: Python, NLP, ML, Search Algorithms

Diffusion Model for Image Denoising (2025)

Implemented a deep learning-based diffusion model to restore noisy images by learning forward and reverse noise processes. Demonstrated understanding of modern generative AI architectures.

Tech: Python, NumPy, PyTorch, Computer Vision, Generative Models

Graph Neural Network for Node Classification (2025)

Built a Graph Neural Network (GNN) to classify social-network nodes using connected-graph representations. Demonstrated skills in graph embeddings, edge propagation, and ML evaluation metrics.

Tech: PyTorch Geometric / NetworkX, Graph Theory, ML

Object Detection & Image Segmentation Models (2025)

Developed computer-vision pipelines for object detection and semantic segmentation using CNN architectures. Trained models, visualized outputs, and evaluated using common CV metrics.

Tech: OpenCV, PyTorch/TensorFlow, CNNs, Computer Vision

Sequence Prediction using RNNs (2025)

Built an RNN-based model for predicting future sequence values. Worked with recurrent architectures, time-series modeling, and sequence learning.

Tech: Python, RNN, Deep Learning

Friends Recommendation System using Graph ML (Oct–Nov 2024)

Designed a social-network friend recommendation engine using graph theory and ML features to identify potential connections based on mutual interests and shortest path criteria.

Tech: Python, ML, Graph Theory

Vector Space Model for Information Retrieval (Apr 2025)

Implemented a vector-space-based search system for retrieving documents matching user queries.

Demonstrated core IR concepts: TF-IDF vectors, cosine similarity, and query matching.

Tech: Python, IR, NLP

RAAS – Personal Assistant App (Sep–Dec 2024)

Developed a full-stack assistant with mood tracking, finance stats, productivity insights, and an interactive UI.

Tech: React.js, Node.js, MySQL, REST API
